# Community Health Logic Model

## Inputs
- Extension and EFNEP personnel (county and main campus)
- Local health networks/coalitions
- Kentucky Office of Rural Health
- Kentucky Hospital Association
- Local Health Departments
- Hospitals
- Farmers markets
- CSAs
- Farmers
- Grocery stores
- Local restaurant and culinary community
- KY Department of Agriculture

## Activities
- Community-based trainings for networks & coalitions
- Agent in-service trainings on working with coalitions
- Community forums & listening sessions based on local issues
- Local market development and support for producers
- CHNAs for local hospitals

## Participation
- Partner nonprofits such as Bluegrass Farm to Table, OAK, Association of KY Food Banks, CFA, etc.
- Center for Crop Diversification
- MarketReady training
- Steering committees made up of local organizations

## Outputs
- Initial Outcomes (KOSA)
  - Increased awareness of opportunities and challenges working with new and established health networks in the state.
  - Increased awareness among general public, increased access to "local" foods; Communities begin listening sessions to discuss their goals in local foods; local land use and other policies supportive of new food initiatives
  - Evaluation resources: Community forums, listening sessions, number of new, formal collaborations created, number of established coalitions/networks coached,

## Situation
Promoting ways to improve access to healthcare services with the goal of sustaining services in rural Kentucky.
Enhance access to local and healthy foods and to assist producers in identifying new market opportunities.

## Assumptions/Resources
- County data profiles, state led trainings and assessments,

## National Indicators and Agent Metrics
- Number of new health organizations created
- Number of participating agencies
- Number of activities initiated by coalition
- Funding dollars received by coalition
- Number of partners engaged
- Number of restaurants/other institutions utilizing local food
- Number of food partnerships formed
- Creation of Food System Map

## Outcomes – Impact

### Initial Outcomes (KOSA)
- Increased awareness of opportunities and challenges working with new and established health networks in the state.
- Increased awareness among general public, increased access to "local" foods; Communities begin listening sessions to discuss their goals in local foods; local land use and other policies supportive of new food initiatives
- Evaluation resources: Community forums, listening sessions, number of new, formal collaborations created, number of established coalitions/networks coached,

### Intermediate Outcomes (Practice Change)
- Health networks and coalitions are strengthened through training, education and increased community engagement. Increased knowledge and utilization of local health services by rural residents.
- Local food access is established; appropriate match between producers and consumers so sustained locally; Community coalitions are established to address access to local foods and utilization of local food; local food production friendly land use and other policies being adopted.

### Long Term Outcomes (SEEC)
- Improve access to quality and affordable health care for all Kentuckians; Sustain needed healthcare services in rural communities through strengthened partnerships.
- Communities sustain coalitions to address local food systems. Policy changes are discussed to increase awareness and access. The number of entrepreneurs in the community is increased due to local food systems. Strong and diverse local food systems are integrated into community development efforts.
